

Who Are We?

ZeusNetwork is a decentralized ERC-20 token “ZEUS” designed to provide users with the ability to donate to charities, disaster relief programs, and fundraising campaigns without the interference of any third party or governing body.

Crowdfunding Examples:

- Natural or man-made disaster relief
- Illness or injury relief
- Poverty relief
- Funeral expenses
- Education donations
- Athletic team fundraising

This cryptocurrency will empower token holders to send, receive and/or raise funds which can be transmitted to any legitimate and registered organization globally, and within seconds.

Zeus aims to change charity and fundraising practices by empowering people to send funds safely to individuals or associations. The goal is to provide the sender with peace of mind, knowing that the funds are being transferred with minimal fees and without the risk of any third-party intrusions or unethical scalping of funds for profit.

Why Choose Zeus?

Donating to charity is big business with many organizations handling several million in revenue. Unfortunately, many organizations have become morally and ethically unsound in how they handle those funds. By applying our blockchain technology, ZeusNetwork will create a new pathway for non-profit crowdfunding distribution and work to eliminate corruption.

ZeusNetwork is built on the Ethereum blockchain, which enables fast and secure transactions where funds can be sent to anyone globally within seconds. This revolutionary technology provides a platform for any user to participate in charitable giving, no matter what the prior limitations may have been. As long as the user has an internet or mobile connection, a transaction can take place.

Crowdfunding Requirements

After ZEUSNetwork has vetted the organizers story, the organizer will need to pay 10,000 ZEUS to deploy the smart contract and begin crowdfunding.
